

# RigWeaver Setup Guide

---

~ Enabling Auto-Rigging in Moho ~

## 1. Placement

Place the file in the following directory within your Moho Custom Content folder:

`scripts/tool/RigWeaver.lua`

\*Simply placing the `RigWeaver.lua` file directly into the `tool` folder is sufficient.

## 2. Verification

Launch Moho. If the `RigWeaver` icon appears at the bottom of the tool palette (or under the "Other" menu), the installation is successful.

Simply import the PSD exported from Krita (LayerWeaver) and run this script to complete the rigging.
